

Occupational Health and Safety Management System

ISO 45001:2018

Purpose of ISO 45001:2018

The purpose of the Occupational Health and Safety System is to help businesses to protect and enhance their most important asset; their people, to drive business excellence. This new standard can help with increased organisational resilience through proactive risk prevention, innovation and continual improvement. Strengthening brand responsibility by committing to safe, healthy and sustainable work. One global occupational health and safety system for all businesses, of all sizes.

The adoption of an Occupational Health and Safety Management System to the ISO 45001:2018 series is a strategic decision for the organisation to help improve its overall performance of compliance requirements and works as a baseline for sustainable development initiatives. The standard continues to be a guidance and therefore is flexible to the extent that it can be integrated into any organisation.

Implementing a Health and Safety Management System (ISO 45001:2018) will help you take into account the obligation as an employer, the overwhelming legal framework around Occupational Health and Safety in the workplace and it ensures your commitment with these requirements together with achieving a stronger overall company culture with focus on Health and Safety. Ensure you have measures in place to protect your workforce, stakeholders, suppliers and clients (Health and Safety is everyone's responsibility).

Benefits of ISO 45001:2018

Client Reach and Satisfaction

- Reputation, satisfaction and trust in stakeholders,
- Shows corporate and social responsibility,

Compliance

- Reduced likelihood of fines and prosecution,
- Demonstrates compliance to customers, suppliers and regulators,

Workplace Safety Improvement

- Reduces workplace accidents and illness which cut related costs and downtime,
- Less downtime on production if illnesses and injuries are prevented,

Engagement

- Health and Safety culture could be improved throughout your organisation,
- Provides a system to identify OHSMS hazards and minimises or illuminates health and safety risks.
